

PRESERVE

"Choose q now; refresh; act on it."

REEVALUATE

"Refresh first; then choose q and act."

Same world transition

S0: A satisfies q -> refresh -> S1: B satisfies q

Generic structured state

stores A, its snapshot, q, and action preconditions

actor may reapply q -> A drifts to B

Lifecycle-gated state

L = (mode, bound ID, selector, guard/policy, action validity)

preserve: gate emits A or rejects; reevaluate: actor selects B
